 A b --1 human protein (89954) induces interferon-gamma
(FN namma) product by immunocompetent cells is the product of a
(150 namma) product (T224]) derived from a human liver library.

FINA clone (T324]) derived from a human liver library.

FINA clone (T324]) derived from a human liver library.

FINA clone (T324]) he clone (T324) governorment of recombinant in the protein. This was used to construct hybridgem H-1, which are dereof until FN damma inducer protein monoplonal antibody H-Imah
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               )mo

Toolls, and cycles. In the produced probability and by produced in the produced hidden probability and be produced in the produced in the produced in the produced construction and an antiviral, antitumor, antibacterial, immunoregulation as an antiviral, antitumor, antibacterial, immunoregulation and belood platelet enhancing agent, and can be used in adoption immunotherapy. It is also used to raise monoclound antibacters. A full-length sequence is given in R99466.
                                                                                                                                                                                                                                                                                                                                  Example A-3-2: Page 36-37: 48pp: English.

A novel mouse protein (K3955) induces interferon damma (ifferdamen) produced mouse protein (K3955). Its sequence was deduced from that of a cDNA clone (T3403) isolated from a mouse liver intrury. Recombinant IFN-gamma inducer protein can be produced in blab violate using host cells, esp. Escherichia coli, transformed with a vector using host cells, esp. Escherichia coli, transformed with a vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Fukuda S. Page 41-42, 48pp. English.

The mattre posttlos of a nowel human protein (PAG56) indices interferon gamma (IFN-gamma) prodon, by immunocompetent cells. It is the product of a cDNA clone (T32404) obed from a human liver library. The protein enhances the cytotoxicity of killer cells and/or indices the formation of killer cells (e.g. NK cells, lymphokide-postivating killer (EAK) cells, and cytotoxic Techls). The mature protein (see also R9958) is useful as an antiviral, antifumor, antibacterial, immunoregulatory and blood platelet enhancing agent and can be used in adoptive immunotherapy. It is also used to raise monochonal antifundies

this is the present sequence of interferon damma inducing factor-2 (III 2). At 5011 2 variant (W21757) and an IGIF variant (W22049), which may be an alternate transcript, also exist, Probes derived from the 11e or a sequences can be used to quantify the expression of 5019 in scalifions that are associated with inflammation or aberrant expression of 5019 2. The protein can be used to screen for compounds that are represented as an atlandace, antagonists or other unitable of sequentially about most sense sequences) of IGIF-2 white to the protein can also be used to diagnose, presented to the control of the protein can also be used to diagnose, presented to the can be used to diagnose, presented to the control of the protein can also be used to diagnose, presented to the can be used to the can be used to diagnose, presented to the can be used to diagnose, presented to the can be used to the can be used to diagnose, presented to the can be used to the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Has previous sequence represents an interferon gamma inducing tactor-2 (1972) unit of sequence in the previous sequence (1972) unit of sequence (1972) unit of sequence (1972) unit of sequence (1972) unit of sequence (1972) and the sequence (1972) to the form a fixed property of the respect of the sequence (1974) as sequences (1974) a

Combined the present sequence represents a novel protein from mouse liver cells. The present sequence represents a novel production in immunecomporent cells. This pitter changes cytotoxicity of killer cells and indices of their formation. It is used as an automotic agent for antitumour financial cells in the treatment of atopic or immune system diseases, e.g. asthmatically in the treatment of atopic or immune system diseases, e.g. asthmatically and in the treatment of atopic or immune system diseases, e.g. asthmatically district including anti-Alicy or antitudent in the atopic or immune system diseases, e.g. asthmatically district indicates with intellection with such asthmatically of the protect system diseases. The immunesteraphy of leukaemia and other concers. When used the immunesteraphy this nevel protect associated with used the intellection of its of intellection to the patient (before affinity in protect to the patient (before affinity in patient) are being unown.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     unery Match 100.0%;

This is an interferon damma (IFN-gamma) inducing polypeptide sequence. This really-edide induces (FN-gamma) reduction in immunocompetent cells (the polypeptide is not commed but is described in JP 27198/96 and 1.44-296. As a symmetric commed but is described in JP 27198/96 and 1.44-296. As a symmetric commed to be presented form of this polypeptide point this river form by closwing a linkage between Asp at amino acid position 47 of the precursor. The charge car is of intend thomat hormathy polypeptide cell and can be shown to be reduced to the precursor of the charge of the control and the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             production

                                                                                                                                                                                                                                                                                                             Polypeptide processing enzyme for preparing mature term of interferon inducing polypeptide claim 3: Page 15: 18pp: English.
This sequence represents the precursor of an interferon quanta (IEN-dumma) inducing polypeptide. The polypeptide induces IEN-damma production in inducing polypeptide. The polypeptide induces IEN-damma production in immunocompetent cells (the polypeptide is not named but is described in JP 27199,96 and 192090,96). An enzyme can convert this pre-cursor form into its active form by cleaving a linkage between Asp at amino acid position 36 and Tyr at amino acid position 37 and Tyr at amino acid position 38 and Tyr at amino acid position 39 and Tyr at amino acid position 30 and Tyr at amino acid position 30 and Tyr at amino acid position 30 and Tyr at amino acid can be enzyme can be estained from a human humantepolitic valyi in alamid separt 1 at. The enzyme can be used for clearing a recombinant IEN damino pro polypeptide to form a mature polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               18-JUL-1997; 305377,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Fig. 1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Alless refore easiemmics.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Bac                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     auszett 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             in the European state of the Colombos (Fig. Cosming) processing the (4\pi)^{-1}(4\pi) . The Cosming of the (4\pi)^{-1}(4\pi)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Burnilles subtilies

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NK cells, lymphokine-activating killer (LAK) cells, and cytotoxic lacels). Recombinate IFM names inducet protein can be produced in high yields using host cells, esp. Escherichia coli, transformed with a merter carrying the enceding cDNA (732402). It is useful as an antiviral, antitumer, antibacterial, immunorcaulatory and blood platelet enhancing agent, and can be used in adoptive immunotherapy. It is also used to raise monocland; antitodies. A full-length sequence is given in R99560.
                                                                                                                                                                                                                                                                                                                A novel mouse protein (R9959) induces interferon-gamma (JEN-gamma) prodn. by immunocompetent cells. Its sequence was deduced from that of a cDNA clone (T72403) isolated from a mouse liver library. Recombinant IFN-gamma inducer protein can be profuced in high yields using host oralls, esp. Fechorichia coli, transformed with a rector can be profited.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (HAYB ) HAYASHIBARA SEIBUTSU KAGAKU. The protein ordinance the sylutoxicity of killer cells and/or induces the formation of killer cells (e.g. MK cells, lyaphoxim-mantizeting viller (AN) cells, and cytotoxic T-cells) the mantice protein (see also page 18, and cytotoxic T-cells) and titumor, antikenterial, immunoragulatory and blood glateler cohancior agent and can be used in adoptive immunotherapy. It is used to raise monoclonal antibudies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       23 SEE 1993) JE-274988.

MR3 Nimera (MSC)2) is a fusion protein composed of bulbat hyelin basic protein (MSC)2) is a fusion protein (See also W00296) and felta PIPA (W00400), a proteclipid protein (PEP) matein that lacks hydrophobic domains 1 and 4 of native human PLP (W06106) but includes PLP aptropes associated with multiple sciences (MS). It can be expressed in a coli transformants using a bNA construct (T41802) conty the MSC21 select (F13902) conty the MS

MM4 chimera (WÜNÜ3) is a fusion protein composed of human myolin basic protein (MBP) foetai isoform MBP21.5 (see also WÜÜ399) and delta PIP4 (WÖGAO) is proteinified protein (PIP) mutrim (that harks all 4 hydrophobic domains of native human PLP (WÜĞ100) but includes PLP epilopes associated with muttiple scients.5 (M5) in can be expressed in F collitransformants using a fine construct (T1893) could, the MBP21.5 delta FLP4 were factor. MP4 chicera and other scool PIP/MPP21 5 polyportides (WOOMS-140) WOOMS-180 are useful for the clinical assessment, diagnosis and treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-FEB-1997 (first entry)

The Claim 35: Page 113-114: 156pp; English.

(W06101) and MBF21.5 (W00399). Delta PIP4 is a proteolipid protein (W06101) and MBF21.5 (W00399). Delta PIP4 is a proteolipid protein (PIP) mulein that lacks all 4 hydrophobic domains of native human PIP4 (W06106) but includes PIP epitopes associated with multiple sclorosis (W8). MRP01 is a frottal infirm of human rigid basic protein (W8). MRP01 is a frottal infirm of human rigid basic protein (W8). MRP01 is a frottal infirm of human rigid basic using a NAA construct (74894). The expressed in bacterial host cells using a NAA construct (74894). PIP polypeptides (see also would), W0F1 in the cambe expressed in bacterial host cells using a NAA construct (74894). PIP polypeptides (see also would), w0F1 in the clinical assessment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Onery Match 100.09;
